

Finnish Transport Agency's (FTA) ftp-server

FTA's ftp-server provide traffic information mainly in national format. Ftp-server is part of Digitraffic service. In future all information will be delivered by web service interface. The information is provided free of charge. Information utilisers can start using the web service interface and ftp-server after making an agreement with Finnish Transport Agency (FTA).

Incident information

(accidents, roadworks, restrictions, adverse road conditions etc.) as provided by FTA's Road Traffic Management Centre.

See [Data model](#), [InfoXML Schema](#) and [DatexII Schema](#).

Data transfer interface

- pull from <ftp.tiehallinto.fi> (different directories for different type of data). Contact Digitraffic for and ftp-account.
- incidents are delivered as separate xml-files in national and datex2 format.
- roadworks are delivered as single file containing multiple situations with “update all” principle.
- frostheave as separate xml-files or multiple situations

Conditions for downloading and using the Finnish Alert-C location database

- Owner: Finnish Transport Agency
- The location database is submitted in a single and multiple table exchange format.
- Use of the location database is free of charge. Registration is required. No contract or license is required.
- Finnish Transport Agency (FTA) can not be held responsible for failures or malfunctioning of equipment. FTA can not be held responsible for direct as well as indirect damages caused by errors in the database or by using or applying the database or its content.
- By downloading the files the recipient agrees with the conditions of use set by FTA.
- The Finnish location database version 1.7 is certified by the TISA forum in 2011 and is available for download.
